

Are you in doubt with your possible pregnancy?

Our medical laboratory can offer hCG test in your blood paid in cash (without a visit of any doctor).

Why hCG?

hCG (human choriogonadotropin) is a hormone produced by maternal placenta after conception. hCG participates in pregnancy maintaining. It is transported from an uterus to the blood and then to the urine with a short delay. At first, its concentration in blood is doubled in each 2 - 3 days.

Why to use a test in the blood?

- it is **more reliable** than usual pregnancy tests from urine commonly sold in a pharmacy
- **earlier diagnostics** of pregnancy in comparison with urine tests - you might get the result at the 8th day after conception (in 3 weeks after last period). If your test result is border, next test is recommended in one week.
- commonly sold urine tests can be false negative or false positive (if they are used too early, are not correctly performed or a test with a worse quality is used)
- blood sampling is provided in our hospital
- **you can be tested anonymous**

The prize: 247,-Kč (including payment for blood sampling)

When: every weekday from 8:00 till 14:15 h
(the result in 30 min)

If you are interest in hCG testing in your blood, please contact our laboratory:
