

# Are you affraid of an intestinal (colorectal) malignancy?

Colon and rectal tumors (colorectal carcinomas) are very common cancers in the Czech Republic.

**Think of yourself and undergo a simple test!**

**Our medical laboratory can offer occult bleeding tests in your stool based on a imuno-chemical quantitative test paid in cash (without a visit of any doctor).**

## Why to choose this test?

- **4x higher sensivity** for serious changes on colorectal mucous membrane in a comparison with usual guajacul tests (f.e. Hemoccult)
- **specificity** for human blood, minimal false positivity
- minimal burden (**only one test without a prior diet**)
- **patent sampling system** eliminates incorrect stool sampling (and so an incorrect test result)

**Prize:** **180 CZK** (paid before if you collect a test-tube)

**When:** **on working days 8 a.m. – 11:30 a.m.**  
(the result within 10 days)

**It is necessary to collect a test-tube with instructions in our lab before!**

**If you are interest in this test, contact our lab:**
