

Are you in doubt with your possible pregnancy?

Our medical laboratory can offer hCG test in your blood paid in cash (without a visit of any doctor.)

Why hCG?

hCG (human choriogonadotropin) is a hormone that becomes present in the blood when fertilised egg implants into the lining of the womb. It is produced by the cells that form the base of the placenta. This is one of the first signs of pregnancy. At first, hCG concentration in blood is doubled in each 2–3 days.

Why to use a test in the blood?

- it is more reliable than usual pregnancy tests from urine commonly sold in a pharmacy
- earlier diagnostics of pregnancy in comparison with urine tests – you might get result at the 8th day after conception (in 3 weeks after last period. If your test result is border, next test is recommended in one week.
- commonly sold urine tests can be false negative or false positive (if they are used too early, are not correctly performed or a test with a worse quality is used)
- blood sampling is provided in our hospital
- you can be tested anonymous

The Prize: 239 CZK (*incl. payment for blood sampling*)

When: every weekday from 8:00 till 11:30 a.m.

If you are interest in hCG testing in your blood, please contact our laboratory:
